

Please delete the crossed out portion. /LA/

A thirty-third through thirty-sixth aspects of the present invention are characterized in that ~~in addition to the scope of any one of claims 29 to 32,~~ a binder used for the dielectric layer is a fluoro resin binder.

[0026]

A thirty-seventh through fortieth aspects of the present invention are characterized in that in addition to the twenty-ninth through thirty-second aspects of the present invention, an ion-exchange material is dispersed in at least one of the counter electrode, the dielectric layer, the light-emitting layer, the transparent electrode layer made of electroconductive polymer and the light-transmitting adhesive layer excellent in adhesiveness to the electroconductive polymer.

[0027]

A forty-first aspect of the present invention is characterized in that a member for lighting a push-button switch comprises an EL sheet according to any one of the twenty-ninth through fortieth aspects of the present invention, a portion of the EL sheet being formed into a convex shape projecting from a rear side near the counter electrode layer to a top side near the transparent electrode layer, and a core material having a key top shape which is inserted into a concave portion of the rear side of the convex shape.

[0028]

A forty-second aspect of the present invention is characterized
